- **Programming: Data Structure, Algorithms, Object Oriented Programming**
- **Project Management: Jira, SDLC, Agile and Scrum**
- **Developer Tools: Git, Visual Studio, Eclipse, GoLand, Postman, Xcode, WordPress**

Projects

Code Marvel website

As part of my role at Code Marvel, a start-up specializing in comprehensive IT solutions and web development, I contributed to the design and development of our company website. This project involved utilizing a variety of technologies including React, Tailwind, and WordPress to create a user-friendly, responsive, and visually appealing site. My responsibilities included front-end development, integrating dynamic content, and ensuring cross-platform compatibility. This project enhanced my skills in full-stack development and demonstrated my ability to deliver high-quality web solutions in a collaborative, fast-paced environment.

Personal Portfolio website

I developed a personal portfolio website using React and Tailwind CSS to showcase my projects, skills, and professional experience. The portfolio features a modern, responsive design, ensuring a seamless user experience across devices. It includes sections for detailed project descriptions, skill representation, and a functional contact form for easy communication. By leveraging React for a dynamic user interface and Tailwind CSS for elegant styling, the portfolio effectively highlights my technical abilities and serves as a central hub for potential employers and clients to learn more about my work.
